DHHTH2 tor 1848

Grown by

MILLER DAHLIA FARMS

R. C. MILLER, Prop.

13041 Twenty-fourth Avenue South

Seattle 88, Wash.

REGARDING DATE OF SHIPMENT

0

Roots may be ordered at any time and will be shipped at any date desired by the customer. However, it is advisable to have them sent not too long before the time for planting, as no Dahlia grower can be responsible for any loss which may occur on account of spoiling or drying out of roots which are in the customers' hands for a month or so before planting. And where early orders are used for forcing for the purpose of making cuttings to plant, there is no guarantee against rotting of the roots in this process. In sections where the spring is backward and the ground is still cold and wet in May, it is advised to keep the roots in the peat moss in which they are packed, and they will sprout nicely with hardly any attention, so when the ground is warmed up the new plant will have a better start than if it had been put in the ground earlier. Parcel post charges are all paid by me, and express charges on large shipments, but where small orders are wanted sent during weather when freezing might occur in transit, the shipment will be made express, charges collect.

WON'T PART WITH FAVORITE DAHLIA

FRESNO, CAL., JAN. 14, 1948—"Your Dahlias are all that you say they are. We put in about 250 bulbs last spring and they were all from you. We have had so many compliments and so many want to buy them. There are some bulbs I won't part with, and one in particular is Cornelia B. Pinchot. That is my favorite of all." Mrs. F. B.

BEST HE EVER GREW

GRIMES, CAL, FEB. 11, 1948—"I might add that the roots which I purchased last year were very good, in fact the best I've ever grown." H. J. A.

LONG SEASON OF BLOOM

JACKSON, MISS., FEB. 9, 1948—The tubers I bought from you last spring were fine and I had blooms from early August until November 30th. The Mother O'Mine especially fine." Mrs. T. D. M.

"The Highest Quality Dahlia Roots Obtainable"

"We Point with Pride . . . "

We have several reasons for being proud of Miller Dahlias, perhaps the main one being repeat orders and letters from satisfied customers. A few excerpts from typical letters will be found in this catalog. For 18 years, year after year many customers have added to their stocks of fine Dahlias, those selected from our yearly catalogs, and have been pleased with our listed selections of varieties. Numerous visitors to our fields have admired the healthy plants and splendid blooms. We take pride in using the best methods of growing healthy, true to name Dahlia stock of varieties selected from the thousands now in commerce. Those listed are the ones we like personally, and we believe you too will have the same pleasure as we have in growing any you may select from the catalog. Descriptions are without any exaggeration or flowery phrases, in an attempt to picture the Dahlias as we grow them here. The result of years of study and practice have been embodied in the cultural suggestions printed in this catalog, and we believe by following them, you, in any part of the country, should have equal or even better results from any Dahlia stock selected from this catalog. In every way possible, we promise that any stock sent out will be

"THE HIGHEST QUALITY DAHLIA ROOTS OBTAINABLE."

P

CLASSIFICATION—Large varieties of Dahlias are classified for exhibition as "A"—those whose blooms grow 8 inches or more n diameter, and "B"—those whose blooms are more than 4 inches and less than 8 inches in diameter, MINIATURES are those under 4 inches and are distinct from the POMPONS in that the florets are of the same type as those of the large varieties. These varieties are divided into the descriptive sections as follows: the abbreviations used in this catalog being:

Formal Decorative—F. D. Informal Decorative—I. D. Semi-Cactus—S. C. Incurved Cactus—Inc. Cac. Straight Cactus—St. Cac.

DESCRIPTIONS—Following the name of each variety here, the classification is first given, then the originator or introducer and the year the variety was first offered for sale. The size is indicated next—diameter X depth in inches of the bloom, then the height of the plant in feet. The length of the stem ir inches from the first bud or leaf below the bloom is next.

PRICES—are for single root divisions and include Parcel Post charges, packing, etc. The only additional charges are when a small shipment must be sent Express, due to danger of freezing in transit early in the season, or C. O. D. shipments.

GUARANTEE—Each root sent out is carefully inspected for soundness and eyes. They are guaranteed to be free of disease and to have one or more live eyes or sprouts, and to be true to name. In the remote case of a variety proving untrue to name a replacement will be made the following spring. Any root considered unsatisfactory by the customer will be replaced or a refund sent on its return within three (3) weeks of its receipt. As the Miller Dahlia Farms has no control over the conditions under which the roots are planted by the customer, no responsibility is assumed for any rotting or failure of the roots after they are planted or used for propagating cuttings. No further obligations than the amount paid for the root is assumed under this guarantee,

WELL PLEASED

TROUTMAN, N. C., MAR. 9, 1948—"I have been well pleased with my former orders." Mrs. G. S.

Alice Walker

VARIETIES OFFERED and RECOMMENDED

ALICE WALKER, S.C., (Miller D. Farms 1945), 7x4-4'. 12" straight wiry stems. Blooms perfectly facing. Bright yellow centers, shading to delicate buff on outer florets. A most graceful flower, and excellent keeper
AMERICAN VICTORY , I. D., 10x5-4'. 17" stiff stems. Blooms perfectly facing. Poinsettia red. Pointed florets curled and slightly twisted. High full center
AUTUMN SUNGLOW, S. C. (Miller D. Farms, 1937), 9½x 4-4½'. 12" stiff straight stems. Some blooms not quite facing. Golden orange buff, narrow florets, heavy bush growth
BEDFORD BEAUTY, Inc. Cact., (Franks, 1946), 6x3-3'. 15" wiry stems. Blooms facing. Rosy magenta, with white central florets
BETTY HUBBARD, S.C. (Armstrong 1939), 10x6—4½'. 10" stiff wiry stems. Perfectly facing. Clear deep yellow. Full bloom, high center, good keeper
BLUE MOON , I. D., (Eastern 1941), 10x5-5'. 15" stiff strong stems. Blooms perfectly facing. Lavender shading to lilac purple at base, giving a bluish effect. Long, heavy florets \$1.00
BLUE RIVER, F.D. (Salem D. G., 1935), 9x3—4½'. 10" stiff stems. Blooms facing. Bluish mauve, about as close to blue as any Dahlia can come. Long heavy florets in full bloom
CARL G. DAHL, I. D., (Hillcrest 1937), 10x4-4'. 14" strong stems. Blooms facing and skyward. Apricot buff shaded old rose

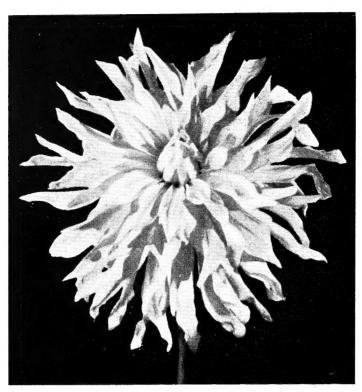

INCOMPARABLE DAHLIAS

ALAMEDA, CAL., JAN. 18, 1948—"I love my Dahlias I get from you. They are simply beautiful, nothing to compare with others. Sure glad I found you." Mrs. E. W.

LOVELIEST FLOWERS EVER SEEN

ORENCO, ORE., FEB. 3, 1948—"We enjoyed the Dahlias so much last year. When my sister visited me from Kansas, she thought they were the loveliest flowers she had seen." Grad. K.

"The Highest Quality Dahlia Roots Obtainable"

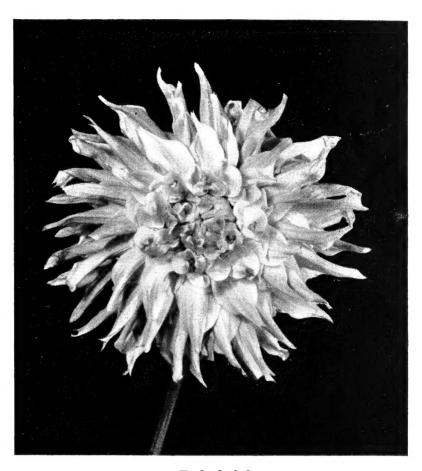

Betty Hubbard

CHARLES L. MASTICK, F.D. (Tyler, 1937), 9x5—4'. 12" straight strong stems. Bright orange with pink reverse. Full bloom, excellent cut flower	35¢

warrior, F. D., (Miller D. Farms 1946), 9x4-4'. 16" stiff stems. Blooms perfectly facing. Bright scarlet. Broad florets somewhat twisted	

ACKNOWLEDGMENT OF ORDERS

ALL ORDERS are either shipped the day following receipt here, or notice sent to the customer by return mail.

C. O. D. ORDERS—No. C. O. D. orders accepted without a deposit of at least 25% of the amount of the order. Collection charges will be added to the amount to be collected by the postman.

SUBSTITUTIONS—Stock of some varieties may not be equal to the demand, and to save time and correspondence or the necessity of a refund, it is suggested the customer allow the privilege of substituting similar varieties when necessary, especially in later orders. Extra value is always given in such cases.

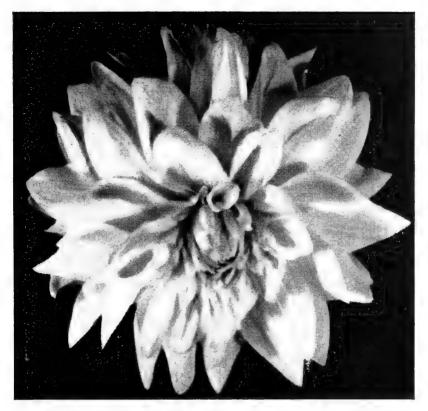

IDENTIFICATION OF ROOTS—Stamped indelibly on each root is its name. This is done at the time of dividing the clumps so that there is very little possibility of a root being mislabeled.

DISCOUNTS—It has been found there is some saving in overhead expenses and labor when large orders are sent out, and this saving is returned to the customer as follows:

Orders amounting to \$10.00 or more deduct 10% Orders amounting to \$20.00 or more deduct 15% Orders amounting to \$30.00 or more deduct 20%

The discount to which your order entitles you may be deducted in sending in the remittance with your order, or will be supplied by me in the form of extra roots of my selection in which case usually somewhat better value is given than the exact amount as listed.

Make checks and money orders payable to MILLER DAHLIA FARMS. Cash, stamps and currency accepted only at sender's risk.

BEAUTIFUL BUT INEXPENSIVE

SAN FRANCISCO, CAL., FEB. 17, 1948—"Recently I asked a friend where she got her beautiful Dahlia bulbs, and she gave me your address. I have long admired hers but never dreamed they were so inexpensive. I told my neighbors I am going to have some go.geous Dahlias this year." Mrs. I. C.

UNUSUALLY LARGE

MERCED, CAL., AUG. 5, 1948—"I want to tell you what good success I had with the Dahlia tubers purchased from you. The blooms on Altmark, Satan and Man O'War are unusually large. Be sure to send catalogue for 1949." Mrs. B. H.

Cultural Directions

For the healthy growth and the lovely blooms your Dahlia planting should be expected to produce, just a few simple requirements are demanded. These are easy to understand and follow when we consider the manner in which the Dahlia plant grows.

The root division which we plant has an eye near or on the part of the stalk which forms the top of the root. This eye contains the really important part of the entire root, and from it a stalk and feed roots grow to form the Dahlia plant. The rest of the root is merely a dinner basket to supply the necessary nour-ishment for starting the new plant. As soon as the feed roots, very fine at first, reach the point where they start to supply enough plant food to enable the newly-formed leaves above ground to begin work, the original root has performed its purpose, and may as well be disregarded. In proof of this, the root you plant may be cut in half or a still smaller portion be planted with a resultant vigorous plant, providing the conditions of soil and moisture, etc., are made right.

Thus the new plant needs nothing in the way of fertilizer or irrigation until the new feed roots are established. And the more numerous and faster-growing these feed roots, the stronger the plant and the better crop of roots for the next year. Any fertilizer should for this reason, not be placed in the hole in which the root is planted, but spread over the entire Dahlia plot, as the new roots will cover in most cases the entire space allotted to your Dahlias.

Some of these new roots will thicken and begin to store up starch and other food elements, forming the new crop of storage roots. It is when these are growing and the buds on the plant are beginning to open that plenty of plant food and water are necessary. It is known that one bloom in its formation requires many times the water and food that is needed for the foliage and stalk growth.

It is clear anything which tends to interfere with the growth of these new feed roots will stunt the growth of the plant, so an over-supply of water at the start, or the presence of rotting vegetation or manure, anything which will cause these roots to rot before they reach a healthy growth, is to be avoided. Plenty of room is needed for root development and space between plants should be enough for good ventilation to avoid mildew of the foliage.

With an understanding of these requirements, we can plan the best way to plant and care for the Dahlias.

The soil should be loose and well drained. Spading deeply as soon as the ground can be worked in the spring is a necessary part of preparation. On heavy clay soil some sort of humus should be worked in, and some sand or fine coal ashes. If new clay, a dressing of agricultural lime raked in the surface after spading will be of advantage. If the ground has been planted to

TOOK EVERYONE'S EYE

GRASS VALLEY, CAL., FEB. 5, 1948—"My Dahlias last year were grand. Grand Slam taking everyone's eye. Also I love little Allbright (Pom) it is the brightest one in my garden of Poms." Mrs. F. F.

MINIATURES BEAUTIFUL

BAKER, ORE., MAR. 17, 1948—"The Dahlias I got last year were beautiful. I don't have much room, and think the Miniatures are the loveliest ever." Mrs. F. X. B.

ACKNOWLEDGMENT OF ORDERS

ALL ORDERS are either shipped the day following receipt here, or notice sent to the customer by return mail.

C. O. D. ORDERS—No. C. O. D. orders accepted without a deposit of at least 25% of the amount of the order. Collection charges will be added to the amount to be collected by the postman.

SUBSTITUTIONS—Stock of some varieties may not be equal to the demand, and to save time and correspondence or the necessity of a refund, it is suggested the customer allow the privilege of substituting similar varieties when necessary, especially in later orders. Extra value is always given in such cases.

IDENTIFICATION OF ROOTS—Stamped indelibly on each root is its name. This is done at the time of dividing the clumps so that there is very little possibility of a root being mislabeled.

DISCOUNTS—It has been found there is some saving in overhead expenses and labor when large orders are sent out, and this saving is returned to the customer as follows:

> Orders amounting to \$10.00 or more deduct 10% Orders amounting to \$20.00 or more deduct 15% Orders amounting to \$30.00 or more deduct 20%

The discount to which your order entitles you may be deducted in sending in the remittance with your order, or will be supplied by me in the form of extra roots of my selection in which case usually somewhat better value is given than the exact amount as listed.

Make checks and money orders payable to MILLER DAHLIA FARMS. Cash, stamps and currency accepted only at sender's risk.

GUARANTEE—Each root sent out is carefully inspected for soundness and eyes. They are guaranteed to be free of disease and to have one or more live eyes or sprouts, and to be true to name. In the remote case of a variety proving untrue to name a replacement will be made the following spring. Any root considered unsatisfactory by the customer will be replaced or a refund sent on its return within three (3) weeks of its receipt. As the Miller Dahlia Farms has no control over the conditions under which the roots are planted by the customer, no responsibility is assumed for any rotting or failure of the roots after they are planted or used for propogating cuttings. No further obligations than the amount paid for the root is assumed under this guarantee.

a root crop the year before an application of bone meal and potash should be made, and this worked into the surface before planting. About 5 pounds of bone meal and 1 pound of Muriate or Sulphate of Potash to every 10 plants.

When the soil has warmed up nicely, and not until then, is the time to plant. DO NOT PLANT A DAHLIA ROOT IN COLD, WET GROUND, and expect anything but failure. Some varieties may pull through, but nothing is gained by planting too early. A hole about 5 inches deep in heavy soil, to as deep as 8 inches in light sandy soil, is dug for each root, and allow at least 3 feet each way between holes. This for the large varieties. The Pompons may be spaced closer, also the miniatures for mass effects. A stake should be driven close to the hole and the root laid therein with the eye or sprout facing up, and toward the stake. The root should be covered about two inches, and the hole gradually filled in as the plant grows. It may be tied to the stake with soft twine or rag to avoid cutting the stalk.

For a bushy plant with numerous blooms the plant may be pinched out after the 3rd set of leaves forms. This will force the buds at the base of the plant to develop and the plant will spread out. For large blooms, pinch out the buds on each branch down to the base buds leaving only one bud to a stalk. This allows long stems for cutting or exhibition, As Pompons and Miniatures are somewhat valued in inverse ratio to their size none of these should be disbudded, but the young plant may be pinched out to make more blooms.

There are a few insect pests which may infect your Dahlias, depending on your locality. Aphis or other sucking insects, or leaf hoppers or other chewing insects. There are a number of good sprays and dusts on the market, including the new DDT which may be used according to directions on the package. Your local feed store or hardware dealer will help you select whichever is indicated by your local conditions.

The ground around the Dahlia plants should be kept in a loose condition by frequent cultivation, deep at first and then shallower as the plant grows and the feed roots spread out, and near the surface. If your summer is very hot, a mulch between the Dahlias of grass clippings, or other material, will help keep the ground cool and avoid overheating the roots. During extreme heat it is advisable to pick off the buds and not allow blossoms to form, thus saving any possible dangerous wilting of the plant.

When watering, after the buds have started to open, and not until then, it is better to give the ground a thorough soaking once a week or every ten days, than to sprinkle the surface every day. The moisture should reach down about a foot to be of the most value.

Dahlia blooms should be cut either early in the morning before the sun starts to dry them out, or late in the evening. The best method of cutting for long keeping blooms, is to carry a bucket of cold water into the garden and plunge the stem of the Dahlia into it as soon as it is cut from the bush. A knife should be used instead of scissors, as the object is to not press the stem shut, but rather leave it so that it will absorb water

readily for the bloom. The cut flowers should then be placed in the cold water container, in a cool dark place, and away from any drafts, for several hours, or if cut in the evening, over night. After that they are ready for placing in your vases or other containers for display, and will keep much longer than if any other method of preparation is used. Too much foliage left on the stem will greatly lessen the keeping quality of the bloom.

After the first killing frost the Dahlia clumps should be dug and stored for the winter. If the sections where there is no frost, or where it comes very late in the year, the plants may be cut down any time and after allowing a few days for the sap to go down into the roots, the clumps may be dug and cared for the same as if they had been killed by frost. It is well to dig the dirt away from the clump and cut down with the spade all around it rather deep before lifting it out. This will cut the feed roots which may extend out as far as two feet from the stalk, and which might break some of the roots from the stalk if not cut. Any roots which are broken at the neck will probably not be any good the following spring.

The clump may be allowed to stand for a while to dry out the dirt, which may then be shaken off gently. Or a gentle stream of water may be used to wash the clumps. The stalk should then be cut off close to the clump, and it is then ready to be divided or stored.

A cool not too dry cellar is the best place for root storage, being sure it is frost proof. It does not need much below freezing to ruin Dahlia roots. Also, dry warm air will cause the roots to dry out and shrivel up, so that most of them will not grow in the spring.

In dividing the clumps, all that is necessary is to have an eye for each root saved, and these eyes are plainly visible at the time of digging, if one wishes to divide them then. This will do away with the possibility of stem rot, which sometimes spoils the entire clumps. Cut surfaces may be dusted or dipped in powdered lime or sulphur and the roots packed in boxes of fine sawdust, or even dry dirt. The name of the variety may be written on the root with an indelible pencil, moistening the surface so the writing will be permanent. This avoids the possibility of lost tags and mixed-up varieties.

Any special problems not covered will be gladly considered on request, and all available information thereto will be given.

SURPRISE! TOOK THREE PRIZES

PALISADES PARK, N. J., SEPT. 29, 1948—"I wanted to wait for the flowers, and what a surprise. All made the grade and plenty of blooms. Thank you so much. I got three prizes at our show." H. M.

RESULTS FROM SUPERIOR STOCK

SPOKANE, WASH., OCT. 25, 1948—"After trying out a few of your superior tubers, I was more than pleased with the results, and am showing my appreciation by placing a large order with you in the spring." I. C. S.

TWO GREAT DAHLIAS

FORT BRAGG, CAL., JAN. 1r, 1948—"Had great success with your Dahlias last year. Especially enjoyed Warrior and Darcy Sainsbury." Miss V. D.

RESULTS ALWAYS EXCITING

ETNA, N. H., FEB. 24, 1948—"Want to say I'm ordering again entirely from you, as the results from your roots have always been exciting." R. K.

BEST STOCK

ANSONIA, CONN, FEB. 13, 1948—"For many years I have grown Dahlias, one year I had 300 of them. The stock I get from you is the best." L. M. R.
